

NTP / POE

OFFICE • INDUSTRY • PUBLIC

Time synchronized via the data network

NTP and POE – NTP (Network Time Protocol) makes it easy to synchronize the wall clocks from a computer. POE (Power Over Ethernet) gives the clock power. Our NTP/POE models are pre programmed with CET (Central European Time) which makes the installation process easy – Just connect the Ethernet cable and power.

3 ways to power

POE (POWER OVER ETHERNET)

Network Switch with POE

Network Switch and POE Injector

Network Switch and AC/DC adaptor

tiq

• Powered by Power Over Ethernet POE or AC/DC adaptor.

• The time is adjusted automatically through Network Time Protocol (NTP)

AC/DC ADAPTER (OPTIONAL)

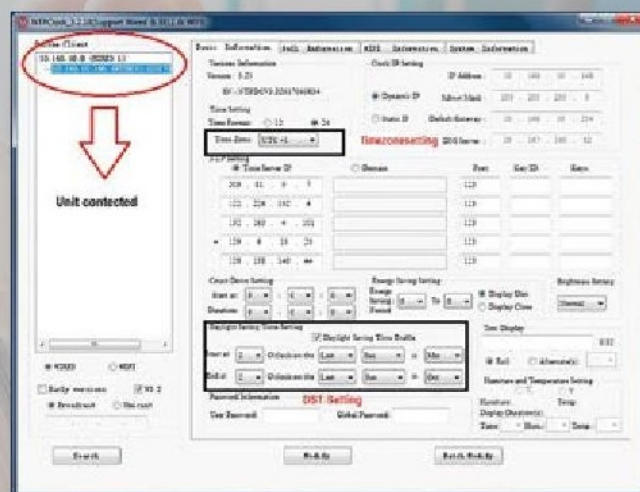

POE

NTP

Easy programme for adjusting manually

If you want to adjust the time: all you have to do is installing a small computer program for adjusting the time zone and DST settings (Daylight Saving Time).

Power adapter optional for all NTP models. If POE no power adapter is needed.
